## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 2-11 and 13 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to independent claims 5 and 9, the claimed invention discloses a method for integrity testing a membrane comprising specifically the steps of backwashing the membrane "in a direction opposite that of filtration with a gas applied at a pressure below a bubble point of the membrane" then proceeding to isolate the lumen and measure a reduction of gas pressure within the lumen for comparison with a predetermined value. The prior art of record, fails to teach this method as the Selbie 6,202,475 reference teaches a method for predicting logarithmic reduction values for a membrane by applying a pressure to a membrane and measuring the flow rate through. This process is conducted separately from a backwashing process strictly for determining the integrity of a used membrane. Other references such as the Bartels 2003/0150807 reference teach methods of backwashing filters for cleaning, however do not make any mention of using the process to determine the filter quality or integrity of the membrane. The Cote reference US 6,324,898 teaches an integrity test method which measures a volume of air passing through the membrane to determine the integrity of the membrane. Cote also teaches backwashing the membrane as a separate step, however does not provide the motivation to merge the two steps into a single step. Although a backwashing method is regularly performed during filtration, and integrity testing routine in determining whether a membrane is integral or must be

Art Unit: 2856

replaced, there are no teachings of, or motivation to combine the two separate methods into a single testing and backwashing process for analysis of the membrane wherein the *pressure reduction within the lumen of the membrane* is monitored. Many of the prior art references would not be able to be combined with one another in such a manner as they rely upon backwashing methods and integrity test methods which take varying amounts of time and therefore could not be combined for simultaneous use.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
